

GENELABS® DIAGNOSTICS

HEV IgM ELISA

Instruction Manual

FOR RESEARCH USE ONLY

NOT FOR USE IN

DIAGNOSTIC PROCEDURES

For the detection of IgM antibodies to Hepatitis E Virus (HEV) in serum or plasma samples.

NAME

The **GENELABS DIAGNOSTICS (GLD) HEV IgM ELISA** is an enzyme-linked immunosorbent assay

for IgM antibodies to Hepatitis E Virus (HEV) in human serum or plasma.

This kit is supplied for research purposes only. It is not intended for use in diagnosis or prognosis of

the disease. In particular this test cannot be used to evaluate blood specimens for the purpose of

donor screening or as a confirmatory diagnostic.

INTRODUCTION

The **GLD HEV IgM ELISA** utilizes recombinant HEV antigens from the structural region of the viral

genome to detect the presence of IgM antibodies in serum or plasma specimens.

CHEMICAL AND BIOLOGICAL PRINCIPLES OF THE PROCEDURE
