

MONOBODIES

ANTI - HIV-1 p17

Clone 2D11

ZMC Catalog #: 0801076 **Unit Size:** 100 µg

ZMC Catalog #: 0801122 **Unit Size:** 1 mg

PRODUCT

CHARACTERISTICS

This murine monoclonal antibody reacts with Human Immunodeficiency Virus Type 1 (HIV-1) p17 protein. The

antibody is of the IgG1 subclass and has been purified from serum-free cell culture supernatant by ammonium

sulfate precipitation. The antibody is supplied as purified immunoglobulin in phosphate buffered saline.

MONOBODIES Anti-HIV-1 p17 (clone 2D11) exhibits reactivity with HIV-1 infected cultures using indirect

immunofluorescence. It also exhibits reactivity with viral lysates examined using Western blotting. In addition, the

antibody immunoprecipitates p17 protein from radio-labeled infected cell lines.

RECOMMENDED

USAGE

Antibody dilutions should be prepared using buffers containing suitable protein in order to stabilize antibody

activity. The antibody may be used in indirect immunostaining techniques to detect HIV-1 core protein in fresh or

cultured HIV-1 infected cells. Studies on core antigen synthesis and metabolism are performed using Western

blotting or radioimmunoprecipitation analysis. The antibody may also be valuable for the affinity isolation of HIV-1

core protein.

STORAGE Aliquot and store at -20°C.
